

All content and PEPID features are loaded directly to the native environment of the PDA. PEPID™ PDA takes advantage of the native OS to provide easy access and performance. Regular updates keep content current with the latest medical and clinical information and services. For stand-alone PDA users, the advantages and benefits include:

- Highly portable
- Wire-free mobility
- Works where there is no or intermittent wireless
- Regular updates
- Puts comprehensive clinical data in hand

PEPID™ PDA Technology

PEPID is a worldwide leader in the development of PDA software and information delivery systems. Our PDA solutions use:

- ASP.Net Mobile controls
- eMbedded Visual C++
- eMbedded Visual Tools
- .Net Compact Framework
- Palm OS v.4 and up – for Palm OS devices
- Windows CE OS v.3 and up – for Pocket PC, Windows Mobile devices
- Microbrowser
- PEPID Viewer on Palm OS devices
- Pocket Internet Explorer on Windows CE OS devices
- PEPID Manager – the synchronization software developed by PEPID.

Clinical content is delivered to Palm OS and Pocket PC (Windows Mobile) devices; and to Windows Mobile-based phones (connected through desktop).

PDA Implementation

- The files for installation on PDA are stored on the PEPID web server.
- A user logs-in based on the account information and receives access to the products and add-ons he or she has purchased.

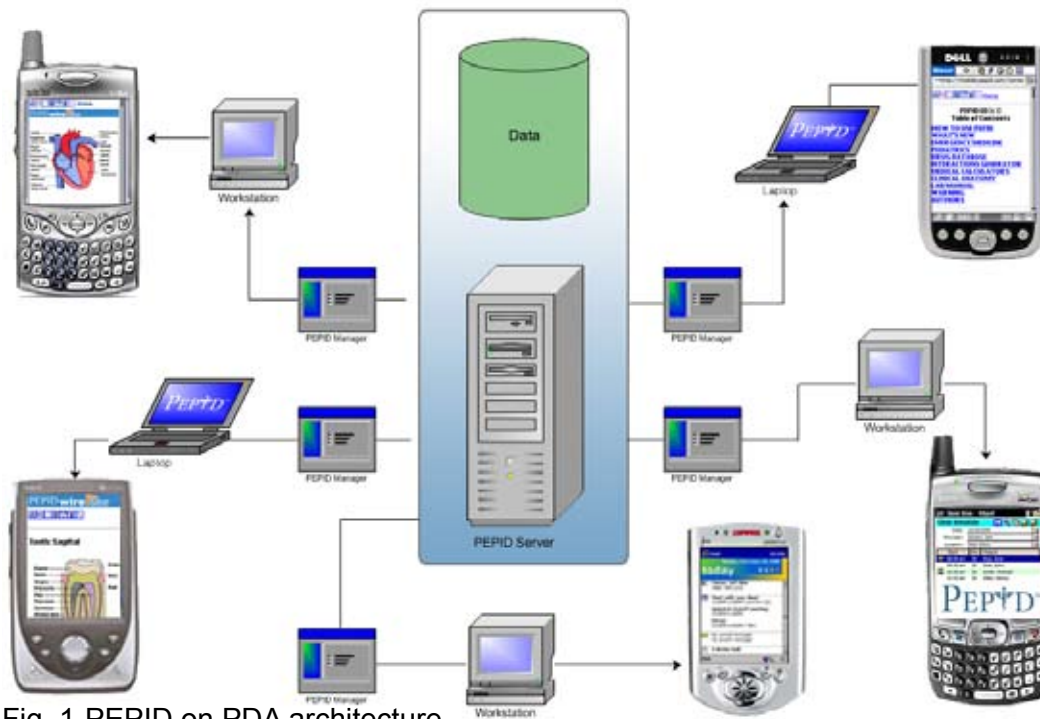

Fig. 1-PEPID on PDA architecture

- PEPID Manager has to be downloaded and installed on the desktop to enable download and to install the files.
- PEPID Manager validates the log-in information against the one stored in the database, checks the subscription's status, calculates amount of the free space on the device for installation and connects to the server to get the selected products for download and installation to the PDA.

PEPID Manager

- PEPID content, illustrations and calculators are incrementally updated and installed through PEPID Manager to the PDA.
- Incremental updates mean less download time, lower server bandwidth and reduced chance of disconnect during synchronization with the server.
